Hi Jan,

Please provide a search of:

[Le, Emily] 1. Residues 1-395 of SEQ ID NO: 29

- _2_Residues_1-200_of_SEQ_ID_NO: 31___
- 3. Residues 1-394 of SEQ ID NO: 29 fused with SEQ ID NO: 32 [Le, Emily], at position 1 of SEQ ID NO: 32
- 4. Residues 1-200 of SEQ ID NO: 31 fused with SEQ ID NO: 32 [Le, Emily] at position 1 of SEQ ID NO: 32
- 5. Residues 1-395 of SEQ ID NO: 29 fused with SEQ ID NO: 35 [Le, Emily] at position 1 of SEQ ID NO: 35
- 6. Residues 1-200 of SEQ ID NO: 31f used with SEQ ID NO: 35 [Le, Emily] at position 1 of SEQ ID NO: 35
- 7. Residues 1-394 of SEQ ID NO: 29 fused with SEQ ID NO: 32 [Le, Emily] at position 1 of SEQ ID NO: 32, fused with SEQ ID NO: 35 [Le, Emily] at position 1 of SEQ ID NO: 35
- 8. Residues 1-200 of SEQ ID NO: 31 fused with SEQ ID NO: 32 [Le, Emily] at position 1 of SEQ ID NO: 32, fused with SEQ ID NO: 35 [Le, Emily] at position 1 of SEQ ID NO: 35

for the above case. Please provide a printout of the first 100 hits. Thanks, Jan.

Emily Le Mailbox, Remsen 3C18 Office, Remsen, 3C35 (571) 272-0903 (Oldsn) MWW B 394d SIMI

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

A;Note: sequence extracted from NCBI backbone (NCBIP:118332)
C;Comment: This protein is expressed on most thymocytes, on a subset of mature T-cells
C;Superfamily: T-cell surface glycoprotein CD4; immunoglobulin homology
C;Keywords: duplication; glycoprotein; T-cell; transmembrane protein
F;1-432/Product: T-cell surface glycoprotein CD4 #status predicted <NAT>
F;1-371/Domain: extracellular #status predicted <EXT>
F;9-86/Domain: immunoglobulin homology <MM3>
F;111-161/Domain: immunoglobulin homology <MM3>
F;191-274/Domain: immunoglobulin homology <IM3>
F;296-347/Domain: immunoglobulin homology <IM4>
F;372-395/Domain: intracellular #status predicted <IVM>
F;396-347/Domain: intracellular #status predicted <IVM>
F;396-347/Domain: intracellular #status predicted <IVM>
F;30-395/Domain: intracellular #status predicted <IVM>
F;30-395/Domain: intracellular #status predicted <IVM>
F;30-395/Domain: stansmembrane #status predicted <IVM>
F;30-395
RESULT 3
RMMQT4
T-cell surface glycoprotein CD4 -
N;Alternate names: T-cell surface
C;Species: Macaca mulatta (rhesus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eur. Ig gamma-3 heavy chain disease proteins - human
C;Species: Homo sagiens (man)
C;Date: 31-Dec-1979 #sequence_revision 23-Oct-1981 #text_change 16-Jul-1999
C;Accession: A90442; A92219; A90198; A93915; A02149
R;Frangione, B.; Rosenwasser, E.; Prelli, F.; Franklin, E.C.
Biochemistry 19, 4304-4308, 1980
A;Title: Primary structure of human gamma3 immunoglobulin deletion mutant: gamma3 heavy.
A;Reference number: A90442; MUID:81021548; PMID:6774747
A;Contents: heavy chain disease protein Wis
                                                                                                                                                                                                                                                                                                                                                                                                                                          A; Molecule type: protein
A; Residues: 59-125, 'EB', 128-226, 228-289 <WOL>
A; Residues: 59-125, 'EB', 128-226, 228-289 <WOL>
A; Rote: this protein lacks most of the V region, all of the CH1 region, and part of A; Note: this protein lacks most of the V region, all of the CH1 region, and part of R; Alexander, A.; Steinmetz, M.; Barritault, D.; Frangione, B.; Franklin, E.C.; Hood, Proc. Natl. Acad. Sci. U.S.A. 79, 3280-3264, 1982
A; Title: gamma heavy chain disease in man: CDNA sequence supports partial gene delet. A; Reference number: A3315, MUID:82247835, PMID:6808505
A; Concents: heavy chain disease protein Omm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A;Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain A;Note: this protein lacks most of the V region and all of the CHI region. Residue 12 cd A;Note: the Bequence of residues 42-76 was taken from the reference that follows R;Michaelsen, T.E.; Frangione, B.; Franklin, E.C.

A; Molecule type: protein

A; Molecule type: protein

A; Residues: 129-131;155-172,'D',174-184,'A',186,'E',188-200,'D',202-217,'E',219-232,'Q',;

A; Note: this has the e15 allotypic marker, 185-Ala

C; Complex: An immunoglobulin heterortetramer subunit consists of two identical light (kap;

hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into lar

C; Superfamily: immunoglobulin C region; immunoglobulin homology

C; Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin

F; 20-82/Domain: immunoglobulin homology < IM1>

Ig heavy chain C region - sheep (fragment)
C;Species: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
C;Species: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
C;Accession: C30554
R;Poley, R.C.; Beh, K.J.
J. Immunol. 142, 708-711, 1989
A;Title: Isolation and sequence of sheep Ig H and L chain cDNA.
A;Reference number: A30554; MUID:89093962; PMID:2492052
A;Scattus: preliminary; not compared with conceptual translation
A;Molecule type: mRNA
A;Residues: 1-308 <FOL>
C;Superfamily: immunoglobulin C region; immunoglobulin homology
C;Keywords: heterotetramer; immunoglobulin homology <IMM>
F;113-182/Domain: immunoglobulin homology <IMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT

A; Molecule type: protein
A; Residues: 118-267; £', 269-328, 'G', 330-334 < DOG>
A; Residues: 118-267; £', 269-328, 'G', 330-334 < DOG>
C; Comment: Lys-335 is removed posttranslationally.
C; Comment: The sequence differs from that of the a allele, from BALB/c mice, at 15% of t C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap C; C) to the conds. In some cases, such as IgA and IgW, the subunits associate into la C; Superfamily; immunoglobulin C region; immunoglobulin homology
C; Keywords: alternative splicing; duplication; glycoprotein; heterotetramer; immunoglobu F; 20-84/Domain: immunoglobulin homology < IMI>
F; 98-118/Region: hinge
                                                                                                                                                                                                                                  F;142-211/Domain: immunoglobulin homology <IM2>
